# Referentne vrijednosti

---

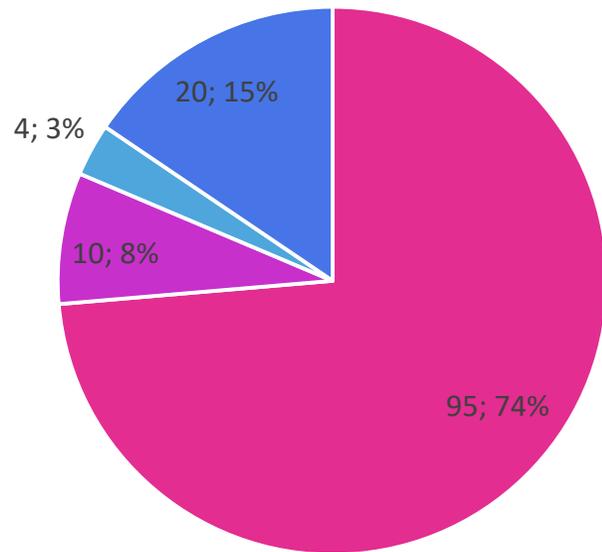

Kod zdravih ispitanika vrijednosti venske i kapilarne krvi su usporedive.

Poseban oprez kod djece (novorođenčadi), onkoloških bolesnika, trombocitopenije.

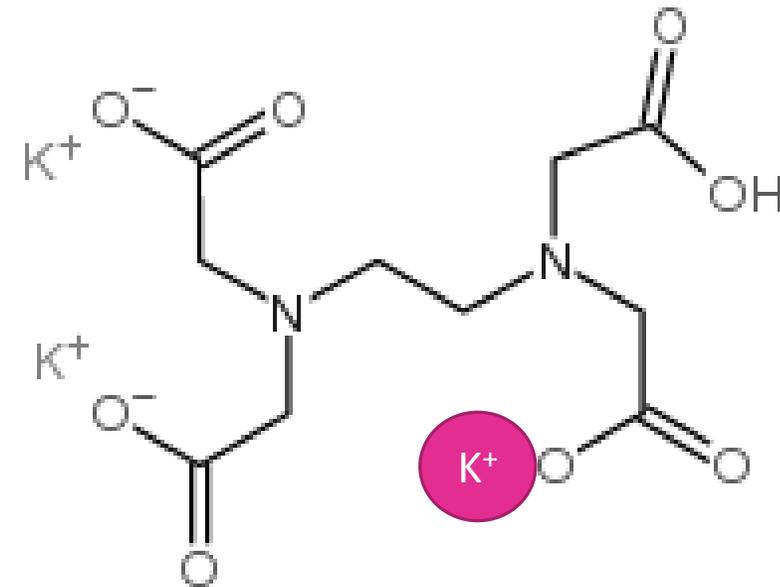

Potreba izrade prilagođenih referentnih vrijednosti?

## 2. Vrsta antikoagulansa

Koji se antikoagulans koristi?

■ K3EDTA ■ K2EDTA ■ K3EDTA+K2EDTA ■ Nije propisano

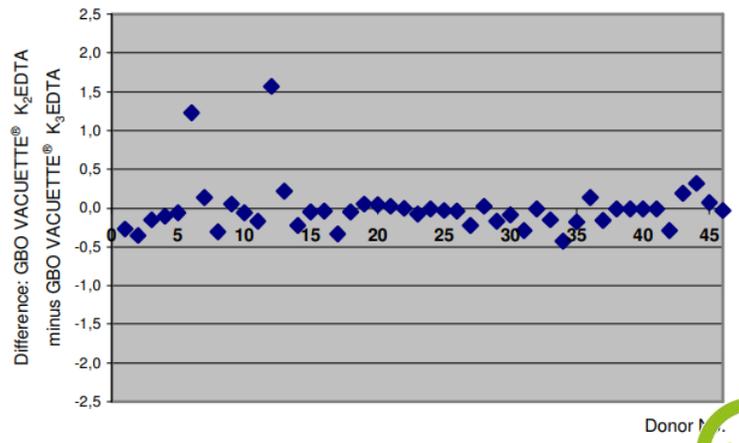

## Recommendations of the International Council for Standardization in Haematology for Ethylenediaminetetraacetic Acid Anticoagulation of Blood for Blood Cell Counting and Sizing. International Council for Standardization in Haematology: Expert Panel on Cytometry

# 4. Lipemija

Postupak obrade lipemičnog uzorka

- Korekcija Hb
- Zamjena plazme
- CHCM
- Odbijanje uzorka
- Obrada bez korekcije
- Izdavanje broja stanica
- Nema procedure

# Problemi obrade lipemičnog uzorka

---

Način detekcije

- $\uparrow$ MCHC

Korekcija Hb

- Ručni izračun MCH, MCHC

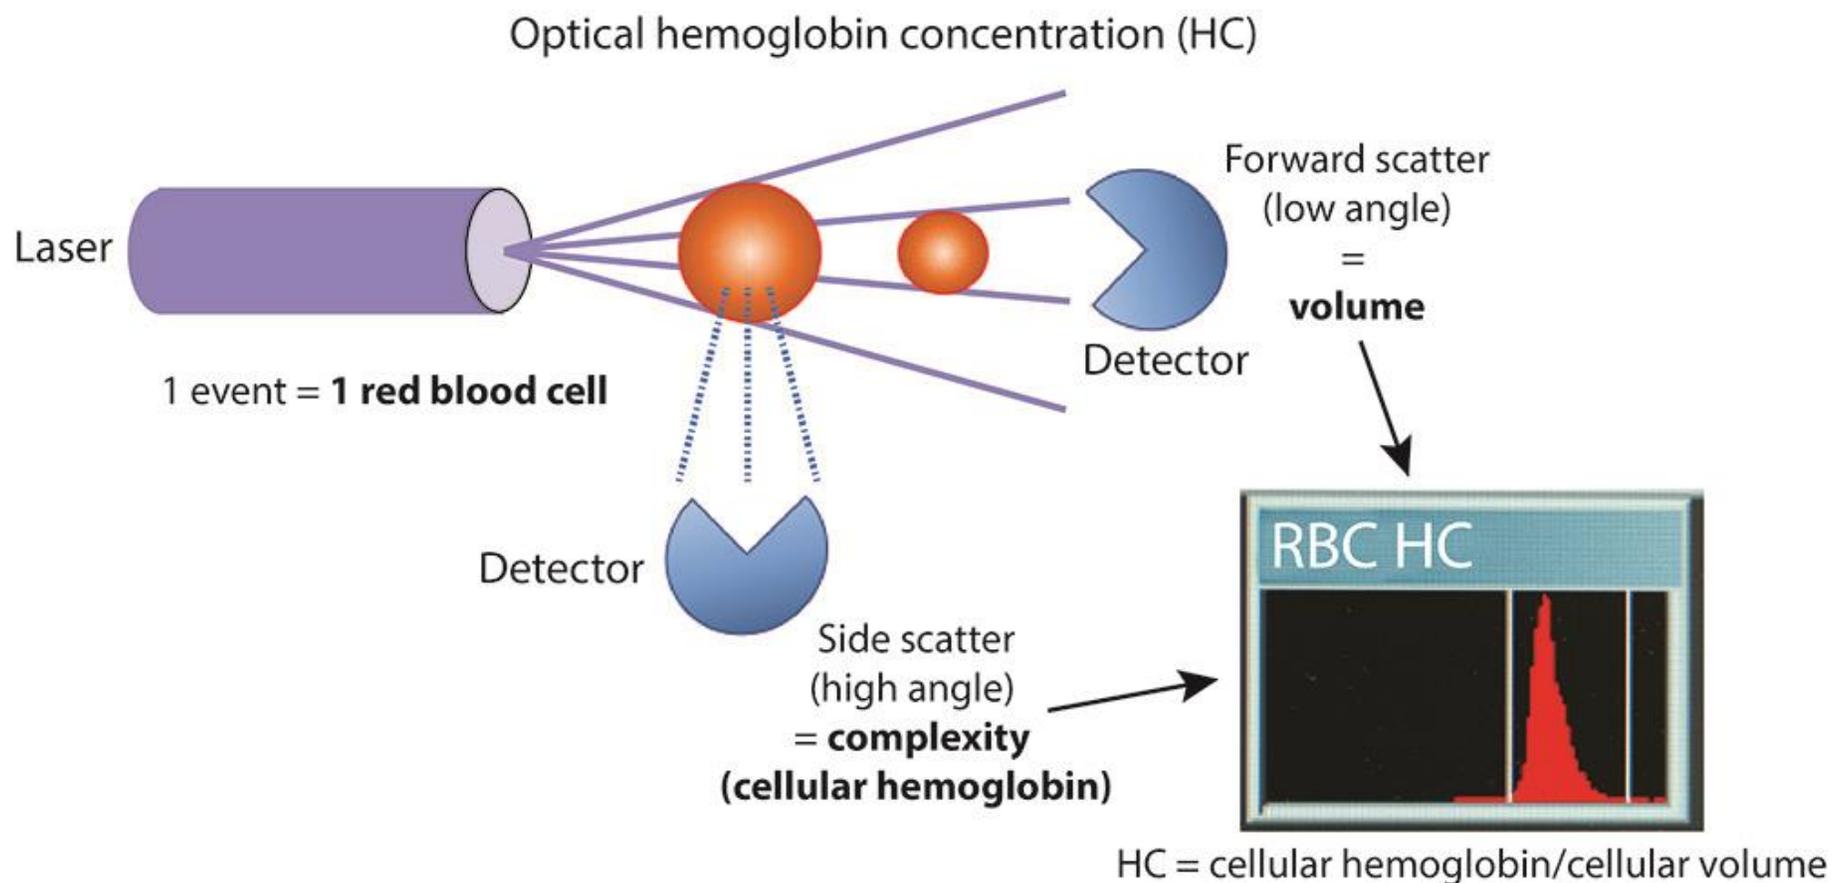

Zamjena plazme

- Mogućnost pogreške pri pipetiranju

CHCM

- Dostupnost analizatora

# CHCM (engl. *cellular hemoglobin concentration mean*; srednja koncentracija staničnog hemoglobina)

# Primjer nalaza

Parametar	Vrijednost	Flag
Erc (x 10 <sup>12</sup> /L)	4,31	L
Hb (g/L)	119	L
Htc (L/L)	0,381	L
MCV (fL)	88,4	
MCH (pg)	27,6	
MCHC (g/L)	312	L

Hb u plazmi = 34 g/L

## Odjel za laboratorijsku hematologiju i koagulaciju

Uzorak	Kompletna krvna slika	Rezultat	Jedinica	Referentni interval
vKe	Eritrociti	4,31 L	x10 <sup>12</sup> /L	4,34 do 5,72
